**Sometimes visibility
is a moving target.**

At night, large moving vehicles must be highly visible so other drivers can make quick, accurate decisions. In all types of conditions, the high reflectivity and wide angularity of 3M™ Diamond Grade™ Conspicuity Markings help to ensure superior brightness. These markings are strong, rigid and corrosion-resistant with a high performance adhesive that sticks securely to trucks, trailers and emergency vehicles. Helping drivers see large vehicles helps make roads safer for everyone.

For over 75 years, 3M has been at the forefront of road safety innovation. 3M.com/RoadSafety

Fire Extinguisher Inside DEC1-5

Fire Extinguisher Inside LABMPDFL1000

Bright, bold lettering is printed with fade-resistant UV inks on exterior grade vinyl with permanent adhesive backing; Measures 1-3/4 in. x 10 in.

Mounting Bracket WLK420118

For 2-1/2 to 2-3/4 lbs. fire extinguishers; bracket only

More Information

Fire Extinguisher Classes

Class A fire consists of ordinary combustibles or fibrous materials such as wood, paper, cloth, rubber, and some plastics. To extinguish, cool the material below its ignition temperature and soak the fibers to prevent re-ignition. Extinguishers appropriate for Class A fires include water, foam, loaded stream, or multipurpose dry chemical.

Class B fire is fueled by flammable or combustible liquids, gases, grease or similar material such as gasoline, kerosene, paint thinners and propane. It can be extinguished by removing the oxygen, preventing vapors from reaching an ignition source or otherwise inhibiting the chain reaction. Extinguishers appropriate for Class B fires include Halon, HCF 125 (clean agents), carbon dioxide, dry chemicals, foam, or loaded stream.

Class C fires involve energized electrical equipment like appliances, panel boxes, and power tools. The extinguisher used must not be capable of conducting electrical currents. If you can first remove the power, you can extinguish the fire like any other fire in Class A, B, or D. Extinguishers appropriate for Class C fires include Halon, carbon dioxide, or multipurpose dry chemical.

Class D fires involve certain combustible metals such as magnesium, titanium, potassium, and sodium. They react violently to water and certain other chemicals. Combustible metals must be extinguished using dry powders specifically designed for use on that metal.

Size: 6-1/4 in. x 3-1/2 in.

Application Information Gladhand & Kingpin Locks

Gladhand Locks

This lock acts like a harness around the emergency gladhand which must be removed before the emergency brakes on the trailer are released.

Kingpin Locks

This lock prevents unauthorized hookups to any fifth wheel trailer & simply surrounds the kingpin preventing theft and/or unwanted movement.

ELIMINATE MUD FLAP LOSS

Our trailer mud flap retention system features innovative spring steel mounting brackets, coupled with either our DirectFlex® mud flap hangers or our spring loaded mud flap hangers.

It's easy to install and virtually eliminates mud flap loss - it's the ideal way to ensure safe and legal operation while on the road.

- ✓ **Reduce CSA Violations**
aka Mud Flap Missing (392.2WC)
- ✓ **No More Cutting & Welding**
Makes Roadside & Driver Repair Possible
- ✓ **Lower Costs**
Minimize Downtime & Repairs

Can you afford *NOT* to try it?
877-843-5195
